Security System App

https://github.com/basdeo05/SecuritySystem

Group Goal Last Week:
1. Figuring out how to implement the app [x]
2. Practice Kotlin[x]
3. Basic Android Studio project - create a local notification[in progress]

Notes: My team has been focusing on planning how we'll implement the core features. I also got to play around with Android Studio and Kotlin -- I created a simple Hello World app and emulated it on a couple different android devices and OS within Android Studio. I'm currently working on setting up notifications at certain time intervals, which I'll want to test on my personal device. - Eric

I also made a Hello World app and emulated it on Android Studio to gain some familiarity with Kotlin and Android Studio. I'm currently working on trying to figure out the baseline of noise in an area. - Merna

Group Goal This Week:

1. Basic Android Studio project - create push notifications at certain time intervals[]
2. Test project on personal device []
3. Start working on: Interface with Android API to record level of noise, display to users in push notifications []
4. Branching with github []
